ELVIS OKEREKE

Software Engineer | Full-Stack & Applied ML | Toronto, Canada | ElvisOkereke.eo@gmail.com

EDUCATION

BEng, Computer Engineering - Toronto Metropolitan University (Formerly Ryerson) APRIL 2025

SKILLS

- **Languages:** Python, TypeScript/JavaScript, SQL, Java, C#, C++, Go, Rust, HTML/CSS
- **Frameworks:** React, Next.js, Node.js, FastAPI, LangChain, ASP.NET Core, Flutter
- **AI:** OpenAI/Claude/Gemini APIs, RAG, MCP, Evals, PyTorch, pgvector
- **Cloud/Data:** AWS, GCP, Azure, Kubernetes, Docker, Terraform, PostgreSQL, Kafka

WORK EXPERIENCE

Software Developer L3 - *TELUS, Canada* AUGUST 2025 to PRESENT

- Led development of SAiL, a Distributed Web App System built with Next.js on Google Kubernetes giving 1000+ TELUS sales team members and Dealers real-time access to 200M+ SMB records in BigQuery via custom tools, LLMs, and agentic workflows.
- Engineered a query-driven data sharding strategy for large, evolving datasets, improving query speed of Cloud Run services by 200%+ across high-traffic, data-intensive use cases
- Owned DevOps end-to-end: RBAC and SSO/OIDC auth, CI/CD, Apache Spark ETL pipelines, Terraform/Pulumi IaC, and logging and monitoring with GCP Log Sinks
- Partnered with stakeholders and Dealers to ship workflow and reporting features for Orbit, a Next.js app adopted by 330+ Dealers for campaign monitoring, KPIs, and order tracking.
- Designed a production MCP server for RAG knowledge retrieval for TELUS Internals; cut LLM inference costs via context-window optimization, semantic chunking, and response caching

Automation and Data Specialist II - *Canada Life Inc, Toronto* JANUARY 2025 to APRIL 2025

- Maintained large-scale distributed Java Spring and React/JavaScript Microservices, while building backend tools with REST APIs, Kafka Pub/Sub, and Plotly Data Visualization library
- Delivered fault-tolerant and highly available data automation tools (SQL, REST API, Selenium)

Automation and Data Specialist - *Canada Life Inc, Toronto* JANUARY 2024 to APRIL 2024

- Developed a Testing Data Dashboard which increased the efficiency of the Statistical Data Analysis (SDA) performed by Test Leads, utilized SQL Server for data storage and retrieval.
- Implemented a complete CI/CD pipeline using Kubernetes, Docker, GitHub Actions and performance indicators to reduce deployment time and enable more frequent releases

ENGINEERING PROJECTS

Personal Programming Projects - *https://Github.com/ElvisOkereke*

- **PitchLab -** AI research engine that validates startup ideas via an 8-stage LLM pipeline. Hallucination controls re-fetch cited pages and pass claims only on a verbatim quote or LLM judge; eval harness scores runs against frozen baselines (pgvector near-duplicate rate, median ROI). Per-stage Claude/GPT/Gemini routing, Zod-validated outputs, cost tracking.
- **Auto Subtitle Translator** - AI Chrome extension that translates video live. On-device OCR reads burned-in subtitles (with YouTube read-ahead) and on-device Whisper transcribes speech, then Claude and DeepL produce context-aware translations overlaid in real time.
- **ClipLite** - On-device AI highlight engine for game clips, built on a Rust/Tauri recorder with GPU-encoded capture. Transcribes, auto-titles, and tags clips for meaning-based search, detects highlights live with quantized ONNX models (labelled evals, CI accuracy gates), and auto-cuts captioned Shorts. Hardware-in-the-loop test rig root-caused a save stall (21s to <1s).
- **DataLogViewer2.0** - free, private, in-browser log viewer for car tuners, live on GitHub Pages. Opens 1M+ row logs with smooth zoom; includes a custom formula language and parser.
