ELVIS OKEREKE

AI Engineer | Full-Stack & Applied ML | Toronto, Canada 437.994.8839 | ElvisOkereke.eo@gmail.com

EDUCATION

Bachelor's of Engineering (BEng) - *Toronto Metropolitan University (formerly Ryerson)* APRIL 2025

- Computer Engineering at Toronto Metropolitan University, earned Bachelor's Degree

SKILLS

- **Languages:** Python, C#, Java, JavaScript/TypeScript, SQL, C++, Go, Dart, HTML/CSS, Rust, C
- **Frameworks:** ASP.NET Core, React, Vue, OpenShift, FastAPI, Kotlin, Next, Flutter, LangChain
- **AI/Cloud:** OpenAI, NVIDIA NIM, RAG, PyTorch, Vertex AI Search, DevOps, AWS, GCP, Azure

WORK EXPERIENCE

Software Developer L3 - *TELUS, Canada* AUGUST 2025 to PRESENT

- Led development of SAiL, a Next.js Distributed Suite of apps hosted on GKE that surfaces 200M+ SMB customer records and data insights from Google BigQuery data in real-time for internal TELUS team members and external Dealers leveraging custom tools and LLMs.
- Engineered Query Driven Data Sharding strategy to handle large, evolving datasets achieving over 200%+ improvement in query speed across high-traffic, data-intensive apps
- Led all DevOps end-to-end for all platforms: RBAC and SSO/OIDC Auth, CI/CD pipelines, data pipelines with Apache Spark, IaC using Terraform, Pulumi, and Kong/Primavera
- Built Orbit, a Next.js app adopted by 330+ unique dealers, that bridges TELUS team members and Kiosk dealers with campaign monitoring, Org KPI, and order management
- Designed and optimized a production Org Knowledge Base MCP Server enabling RAG-based organizational knowledge retrieval; reduced LLM inference costs via context-window optimization, semantic chunking, and response caching

Automation and Data Specialist II - *Canada Life Inc, Toronto* JANUARY 2025 to APRIL 2025

- Maintained large-scale distributed Java Spring and React/JavaScript Microservices, while building backend tools with REST APIs, Kafka Pub/Sub, and Plotly Data Visualization library
- Delivered fault-tolerant and highly available data automation tools (SQL, REST API, Selenium)

Automation and Data Specialist - *Canada Life Inc, Toronto* JANUARY 2024 to APRIL 2024

- Developed a Testing Data Dashboard which increased the efficiency of the Statistical Data Analysis (SDA) performed by Test Leads, utilized SQL Server for data storage and retrieval.
- Implemented a complete CI/CD pipeline using Kubernetes, Docker, GitHub Actions and performance indicators to reduce deployment time and enabling more frequent releases

Explore Intern - *Microsoft Corp, Toronto* MAY 2022 to AUGUST 2022

- Built a cloud-native chatbot application using Azure AI services that addressed 2 key business cases, resulting in improved customer service and attained 3 Azure Certificates

ENGINEERING PROJECTS

SWE Capstone Project - Minimizing Bias In LLMs

- Developed Python/PyTorch-based fine-tuning scripts to reduce bias in large language models, Achieved a 20% reduction in measured bias while maintaining model performance.
- Implemented advanced debias and optimization techniques including Social Contact Debias, Gender Logits, Custom Loss Functions, LoRA Configs, and Parameter Efficient Fine-tuning.

Personal Programming Projects - *https://Github.com/ElvisOkereke*

- **AI-HQ** - Next.Js App, hosted on Vercel, users chat with LLMs, web search, generate images and code. Uses Server Component Architecture, and NextAuth OAuth2 standard with JWTs
- **DataLogViewer2.0** - Flutter/Dart built cross-platform Mobile/Desktop SaaS Platform that displays and stores automotive sensor data from CSV format, made for hobbyists Leverages Pytorch Lighting Long Short-Term Memory, to classify data with a Flask backend
